Abstract of Disclosure

A method for assembling a control for use with a cooling device includes providing an attached control that is configured to control the cooling device, and installing a wireless interface in the attached control.

Figures

Figure 1: A schematic diagram of the experimental setup. It shows a light source (S) emitting a beam of light that passes through a series of lenses (L1, L2, L3) and a filter (F). The light then enters a fiber optic cable (F) and is directed to a detector (D). The diagram is labeled with various components and their connections.
